ANCIENTS

"Ancients I - The Deathwatch" is a 3-dimensional fantasy role-playing game that up to four players can play. The adventure takes place in the city of Locklaven, where you must solve a number of quests and defeat many different enemies. The Characters will need to use every spell and every weapon just to stay alive in the dungeon of Locklaven. You can choose between many different characters, classes, races, spells and weapons but choose your Characters carefully for you will need a strong, well balanced party to survive your adventure.

Requirements: *(VGA graphics, mouse, with a hard drive)*

How can Micro Star offer software of this quality at such an incredibly low price? Because it is being distributed under a marketing plan known as **Shareware**. Enclosed is a complete, fully operational program with documentation. If you are satisfied with the program, you can register the program with the author and receive additional benefits. These benefits often include updates, technical support, notification of new versions, a printed user manual, etc. The Shareware plan prevents you from paying hundreds of dollars for a program that you do not like or that does not meet your needs. Technical help is available from Micro Star. See inside for details. © Copyright 1992 Micro Star

RUNNING THE MICRO STAR DISKETTES

1. First, boot up your system. If you have a floppy drive system, insert your DOS system diskette in drive A and turn on the computer. If you have a hard drive system, simply turn on the computer. The computer will go through its system checks and after a few moments you will be presented with the DOS prompt (depending on your computer setup, this will be either A> or C>.)

2. After making backups of your Micro Star diskettes, insert your *copy* of the original Micro Star disk in drive A. If there are multiple disks in your package, start with disk #1.

3. Make sure you are at the A> prompt. To do this, type **A:** and then hit the <ENTER> key.

4. Before doing anything else, check the label on the Micro Star original for a startup command. Under most circumstances, this command will be **MS**, but at times may be different.

5. To run the command, type in the command at the DOS prompt and then press the <ENTER> key. Running MS will present you with either a menu or an instruction screen. To use the menu, press the letter in the angle brackets (<>) to run that function. If you aren't presented with a menu, simply follow the instructions on the screen to get started.

6. We highly recommend that you read through the program documentation (if any) before running an application.

7. If you are still having trouble getting the software started, give our help line a call at (619) 931-4946. Please take note that our technicians are there to *help you get the software started* and may or may not be able to help you with instructions or usage of the program.

Thank you for supporting the Shareware concept!
