plus/4 **£5-95**

"TABLETS OF HIPPOCRATES"

For the CBM 16/PLUS 4

Enter the magical world of adventure without leaving your own armchair . . . with the help of your trusty computer . . .

In 435 B.C. Hippocrates discovered a cure for cancer. This was written on two gold tablets, which were then hidden for safety in a magical forest and forgotten.

The whereabouts of this forest has recently been discovered. It is your job to enter the forest alone and find the tablets and return with them to the start.

The computer will act as your puppet. Guide him (or her if you prefer) with simple sentences usually of verb/noun type. E.G. take candle. Words he knows include n (for north), s,e,w, up, down, take, drop, look, list, help, read, climb, make, use, move, fill and many many more. You are advised to draw a map as you go along . . .

To make life easier the function keys have been pre-programmed with certain common words. These are:-

P.T.O.

Key 1 - look	Key 5 - climb
Key 2 - take	Key 6 - read
Key 3 - drop	Key 7 - list
Key 4 - use	Key 8 - help

If you forget which keys do what then type "key".

There is also an option to save a partially completed game. Position a blank tape correctly and type "save". To continue with a saved game position the tape at the point saved and type "load".

Should you wish to start a game again we have saved a game at the starting point and this is on the tape immediately after the main program and data.

If you get really stuck then send a stamped addressed envelope to us for a free help/answer sheet. GOOD LUCK
