

MEGAMAN

Version 1.4 Enhances both
Wizardry(r) & Knight of Diamonds(r)

WITH THIS DISK YOU CAN:

PRINT OUT A SUPER ROSTER

DETAILED PRINTOUTS ON:
ALL CHARACTERS IN EITHER SCENARIO
OR REPORT ON SINGLE CHARACTER

HARD COPY ON A CHARACTERS'
WEAPONS, SPELLS & MAGIC ITEMS!

The MEGAMAN Data Disk also provides a total of 40 very tough characters (good, evil, & neutral) with every imaginable weapon and spell. Using one or more of these invincible characters as a guide will teach you the ropes of the maze and allow you to "learn your way". The Data disk print routine will operate on your friends scenarios, too!

KNIGHT OF DIAMONDS(tm)

ADDENDA

When the MEGAMAN manual was last updated, the second scenario of WIZARDRY(tm) was not being distributed. Therefore, on page 13, we informed you that we were unsure whether your version was compatible with the new scenario.

You can't predict what you haven't seen! As it turned out, some characters would transfer, but the print routine was incompatible.

With version 1.4, which you now possess, the MEGAMAN Data Disk will work with both equally well.

To activate the K.O.D. function on the main menu of the MEGAMAN program, you must first make some detailed preparations!

First, you use the original WIZARDRY(tm) Master diskette Utility. Make a new Scenario (sound familiar?) and do the WIZMATE1 - 20 on it as described on page three of the MEGAMAN manual. Set the diskette aside for future use. Now, take the Master of the KNIGHT OF DIAMONDS(tm) and using its Utility Section Make a new Scenario.

The authors of the original program have not provided a method of mass transfer.....so what you do is Transfer each of those 20 WIZMATES from the 1st scenario to the KOD Scenario which you have just made.

Next, remove the K O D scenario disk from the drive, replace with the MEGAMAN Data Disk Version 1.4 and follow the prompts, and precautions. When you reach the proper place, indicate Option #2 K O D. Press return, you should now be at main menu. Remove MEGAMAN and replace with the K O D Scenario with the 20 transferred WIZMATE characters. Select the (U) function. That's it you now have another MEGAMAN scenario!
